                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          zbrafish@watson.wustl.edu
                                                                                                                                   sites of the psport vector (BR). Library was constructe by Matthew Clark (Lehrach lab; ICRF, London and Max Planc Institut fuer Molekulare Genetik, Berlin), cDNAs for EST mybridization fingerprinting of arrayed clones from embryonic shield stage (5 6 h) libraries. Fingerprint data were used to computationally cluster cDNAs, and a single cDNA from each cluster was chosen for sequencing. In some cases multiple members of the same cluster were
                                                                                                   sequenced to assess clustering parameters or single clones
                                                                                          were sequenced additional times

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      green seedlings were challenged with isolate 5874 (AvrMla6) of Blumeria graminis f. sp. hordel, and leaves were harvested 20 and 24 hr post-inoculation and snap frozen; uninoculated leaves were harvested 20 hr post-inoculation (Wei, Wise). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Choi, Close). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum Dalmer, Frisch, Atthrs and Wing).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               see Close TJ, Wing R, Kleinhofs A, Wise R (2001)

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL10176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB77077-ABB72072).
                                                                      Sequence 2112 BP;
                                                                                                                 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID NO 31775; 21pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2001-656860/75.

                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published.pct_sequences.
                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLO1840-ABL16175) and the encoded proteins

New isolated nucleic acid genes from Drosophila and interactions detection reagent for detecting 1000 for elucidating cell signalling and c 0 or more cell-cell

Claim 1; SEQ ID NO 41803; 21pp + Sequence Listing; English.

capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins at ftp.wipo.int/pub/published\_pct\_sequences The invention relates to an isolated nucleic acid detection capable of detecting 1000 or more genes from Drosophila. The The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from sequences (ABL01840 (ABB57737-ABB72072) ion reagent

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

is

Claim 1; SEQ ID NO 31772; 21pp + Sequence Listing; English

insecticides, therapeutics and pharmaceutical drugs. The discloses genomic DNA sequences (ABL16176-ABL30511), essequences (ABL01840-ABL16175) and the encoded proteins

for this patent did not form part of the printed

sequences (ABL0184) (ABB57737-ABB72072

RESULT 10
ABL10262/c
ABL10262 standard;
useful in developmental biology and in elucidating cell signalling and inserticines; in higher eukaryotes for the development of inserticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABLIG511), expressed DNA sequences (ABLIG176-ABLIG511), expressed DNA sequences (ABLIG176-ABLIG511).
                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent
                                                                                                                                                        Claim 1; SEQ ID NO 25268; 21pp + Sequence Listing; English.

P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence averlaps with the 3' end of AAH41224 and the 3' end of this sequence overlaps with the 5' end of AAH41226. The proteins of the present invention have various potential industrial uses,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 349980 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleotide sequences isolated proteins useful in industry -

These genes include I-8U, prostacyclin-stimulating factor, isf-2, tissue specific mRNA, insulin-like growth factor binding protein 6, OSF-1, gas-1, YMP, BTG2, pre-B cell stimulating factor homologue (SDF1a), peripheral benzodiazephne receptor, and cellular ligand of annexin II (pll), respectively. These diseases include congenital heart failure, dilated congestive cardiomyopathy, benefits the cardiomyopathy and the congestive cardiomyopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hypertrophic cardiomyopathy; restrictive cardiomyopathy; mitral valve disease; aortic valve disease; tricuspid valve angina pectoris; myocardial infarction; cardiac arrhythmia; pulmonary hypertension; arterial hypertension; renovascular arteriosclerosis; atherosclerosis; cardiac tumour; ss.
